

*instinctools is a Smart Sourcing Software Development Company.

We are helping you to reach your targets:

✓ Premium Knowhow

Our expert knowledge will lead you through possible project risks. And increase the quality level of your product or project deliverables.

✓ Time-to-Market

IT outsourcing services accelerate not just time-to-market, but free up valuable management bandwidth, allowing companies to focus on their core issues and be as competitive as they need to be.

✓ Optimized Budgets

We have different cost strategies for our customers:

1. Proved Smart Sourcing approach, which is a blended sourcing strategy of onsite, offsite and offshore development resources and allows to manage all risks in Western Europe.
2. Additional costs reduction is also available by Full Outsourcing to Eastern Europe.

✓ Flexible Teams

Cooperation with *instinctools ensures fast and flexible scaling of your project team. You avoid on-boarding investments and risks.

"The development team of *instinctools have fulfilled our expectations in terms of delivery schedule, quality and budget conformance. We will gladly place development orders to *instinctools also in the future."

Our own product DITAworks is a perfect showcase for development of a state-of-the-art software product by using Eclipse platform.

DITAworks is an integrated toolset for modeling, authoring and publishing structured content and has been developed on Eclipse RCP. When creating the web-based version on RAP we have been benefiting from 80% code re-use of the RCP application, which tremendously accelerated our time-to-market, decreased cost and thus gave us a strong advantage over our competitors.

Our Eclipse Services

✓ Design and Implementation

- Customization, integration and testing of Eclipse-based applications
- Rich Clients(RCP) for J2EE/Java EE applications
- Individual solutions based on Eclipse RCP and Eclipse RAP
- Solutions based on Eclipse sub-projects (e.g. GMF, GEF, EMF, ECF)
- Quality Analysis

✓ Support and Maintenance of existing, already developed Eclipse applications

✓ Consulting around Eclipse Technology

- Project design, review
- Architecture design, review
- Tools and components selection
- Project implementation strategy

✓ Consulting in the areas of RCP and RAP

Why Smart Sourcing

Smart Sourcing is outsourcing through a trusted partner that will provide you with Project Management and an optimized blended team of onsite, offsite and offshore development resources weighted by your expectations in cost, delivery and risk. Smart sourcing to us allows you to delegate the management of your outsourced development tasks and eliminate the typical risk of a standard outsourcing relationship.

We also offer Full Outsourcing to our customers. In this case you directly contract with our European outsourcing team of highly developed software engineers in Belarus.

Membership

Why Eclipse

The consistent commitment to Eclipse technology will increase quality and productivity of your applications, while development cost and time-to-market will decrease.

✓ Re-use Potential

Eclipse platforms are everywhere. Due to huge amount of existing modules, components and frameworks, Eclipse rapidly decreases applications development time and budgets. The modules can combine in platforms for different needs. Business applications, management tools, games – whatever you need. Eclipse changes the way you develop because of sharing, reuse and collaboration.

✓ Exceeding user-base

Eclipse is popular. Each month there are millions of downloads of the Eclipse IDE from mirrors around the world. It is tried, tested and approved. Over 500 committers and 50 companies together with *instinctools are actively creating software components. The high number of Eclipse users and suppliers generate network and synergy effects.

✓ Integration fast and easy

Eclipse can function as an integration point. Building a tool or application on top of the Eclipse Platform enables the tool or application to integrate with other tools and applications also written using the Eclipse Platform.

✓ Vendor-neutral

As an open source effort, Eclipse is vendor-neutral. This eliminates vendor lock-in and makes it easier to drive changes in your IT.

✓ Easy moving to web

Rich Ajax Platform (RAP) enables development of rich clients and web clients from a single code base. RAP maximizes code reuse up to 80% by including the largest-possible web-enabled subset of the Rich Client Platform (RCP). Thus, you can easily move your application interface to the web.

“Analyzing our past Eclipse projects we arrived at the interesting conclusion that the ratio of newly developed code to code reused from Eclipse Ecosystem was around 25% to 75%. That’s why we strongly recommend to search for existing components from Eclipse Ecosystem before developing your own code.”

***instinctools Senior IT Manager Alexey Spas, on Eclipse Application Developer Day, Karlsruhe July 7th, 2009**
