

# JOB SEARCH APPLICATION

Our customer is a diverse technology company that owns and supports several brand verticals, including retail, travel, and other industries.

## About the Product

The idea of our customer was to develop a service that helps with a job search. The target audience for the service is Millennials or Generation Y. Their distinctive feature is extensive involvement with digital technologies. Therefore, the service offers the young generation the facility for them to look for a job in their usual way: by using digital technologies through recording a video CV.

## Challenge

The customer tasked us with the development of a mobile application for two platforms: Android and iOS.

The company also plans to entrust us with the development of a web application for recruiters.

## Solution

To manage the project's task, in particular, to record a video CV, the greatest emphasis was placed on the development of the technological backend.

Our team met all the requirements of the customer and successfully delivered the app. The customer was pleased with the efficiency of communications and the quality of work delivered.

## Key features

Video CV recording

Adding key skills and tags to facilitate searching

Possibility to maintain correspondence with a potential employer or potential employee

Identification of users through document verification

Possibility to add various social networks

A system of applicants' ratings, which allows the recruiter to be confident about the honesty and openness of applicants

## Technologies

- Node.js 8.4.x
- mongodb
- docker for deploy
- Firebase
- Java/Android
- Swift 3
